

Liberty Series

CUSTOM SOLID WOOD DOORS

KEY TO OUR QUALITY

The Liberty Door Series was created for you, the distinguishing customer. Each door in the Liberty Door Series is hand crafted and assembled in our Ohio City, Ohio location using the finest grade of hardwood lumber available. Our craftsmen use the latest technology along with time tested construction methods, such as, stave core construction, doweled corners, and hand sanded panels to provide an overall superior quality. These methods start the arduous process of constructing a door that captures the warmth and beauty of solid wood, but also will stand the test of time. Our vast selection of standard door designs, door top options, door panel options and custom capabilities, will allow you to select a door that provides the perfect combination of style and elegance to compliment your home's décor. The endless options, superior construction and quality, only found in "Made in America" products, are just some of the advantages of the Liberty Door Series. Liberty Doors by Teem Wholesale are the right doors to make your dreams a reality!

SOLID TO THE CORE

The strength of a door can be determined by its core. Each Liberty Door is constructed with the highest quality, laminated stave core construction to ensure maximum strength. The core of a Liberty Door is manufactured by gluing together multiple pieces of lumber with solid wood faced veneers. The stresses of each piece of lumber within the core work with each other, resulting in a door that does not bow, bend, or twist over time. This small aspect of a Liberty Door's superior construction makes a big difference in the lifetime of the door and the lifetime of your satisfaction.

Made in America

The high quality standard of "Made in America" products continues with Teem Wholesale Inc.'s Liberty Series doors. Imagined, built, and delivered, the Liberty Series offers custom, solid wood doors that are one of a kind American made products. The journey of a Liberty door begins in the Appalachian Mountains, travels through the skilled hands of our custom craftsmen, and ends in the comfort of your home. Our 100,000 square foot facility provides a climate controlled environment to create doors of superior Liberty quality. The personal pride that each door is constructed with is passed on for generations; it's not just a door, it's a way of life.

Wood SPECIES

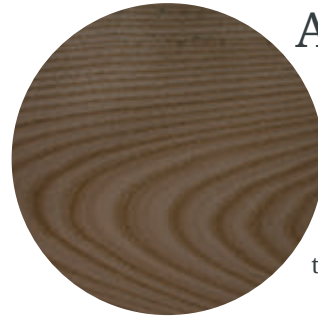

OAK

One of the most common domestic hardwoods available. It's light brown to slightly reddish color is extremely versatile and receptive to a variety of stains and finishes. The dense, durable wood contains a uniform grain and retains its natural characteristics very well.

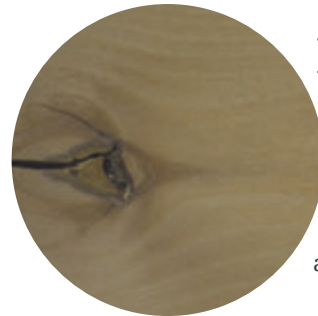

CHERRY

This impressive hardwood has a rich reddish brown tone that can range from light to dark, and complemented by a straight, fine grain that can contain pith flecks and "beauty marks". Cherry can be beautifully finished and over time the species tends to darken giving off a rich, warm color.

ASH

Ash wood typically consists of a very uniform and consistent grain. It is pale white in color, with brownish red strands throughout. When stained the coarse grain is still evident. Ash is extremely dense and durable and withstands the elements well.

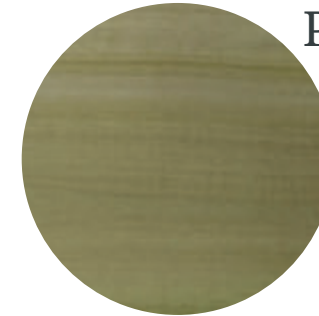

KNOTTY ALDER

Typically light brown with red and peach color variations; Knotty Alder is most identifiable by the open, solid knots of various size, color, and shape. The distinct characteristics of Knotty Alder can also be enhanced by stain or finish.

SPECIALTY

Liberty Doors is proud to accommodate a wide variety of wood selections. If the selection of your choice is not listed, please contact your Teem Wholesale representative for more options.

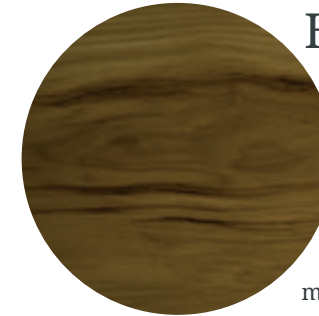

POPLAR

Naturally the species has a light yellow brown color with variations of green tints. Exposure to light tends to darken the green colors to brown. The typically straight and even grain is easily stained or painted due to its smooth surface.

SOFT MAPLE

The growth rings found on soft maple are less distinct and lighter in color. The sapwood is typically grayish white in color with variations of darker reddish brown. With a fine texture and close grain it has an ample surface for staining and finishing.

HICKORY

Noted for its hardness, durability, and strength. With an unpredictable grain that can appear straight or sometimes wavy, hickory can come in a range of colors from blond to deep reddish brown. The dramatic character of the species is increased by random knots and mineral streaks throughout.

AFRICAN MAHOGANY

An exotic wood with a light to deep reddish brown color is extremely durable and rot resistant. The grain is typically ribbon like, but may also be straight with an even, medium to coarse texture. This unique wood can also have a shimmering finish.

RUSTIC

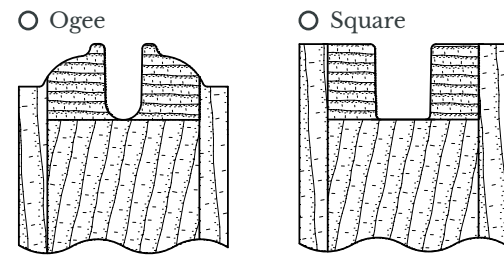

Select species are available in rustic grade. This may include a wide variety of dark and light wood colors, structurally sound knots, small crack and/or checks. Varying mineral streaks, pith marks, and staining all may occur when choosing a rustic grade material.

Details

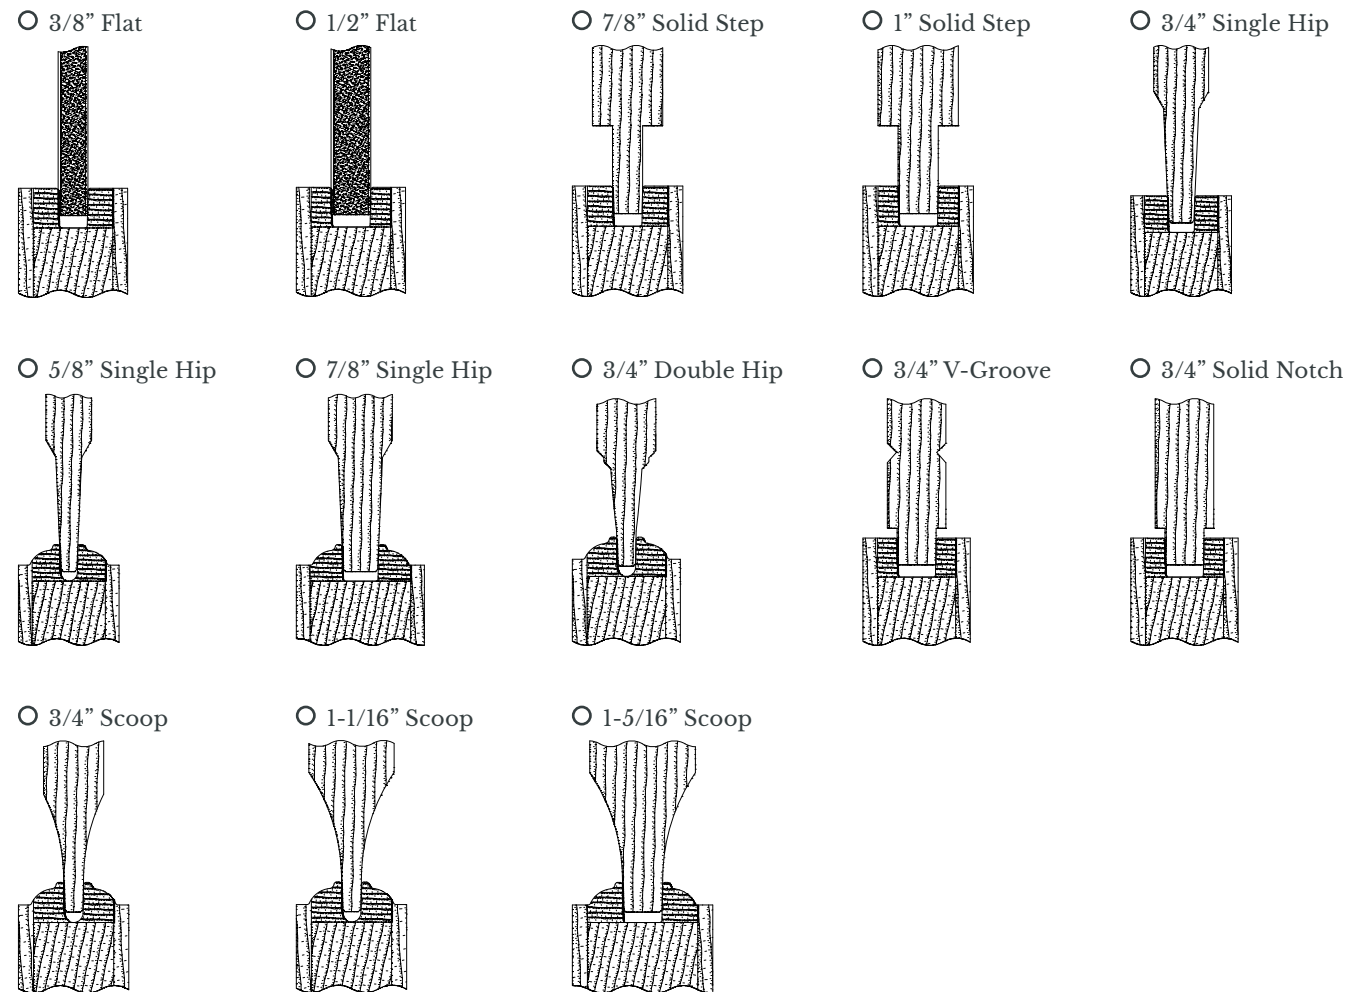

OPTIONS & EXTRAS

The Liberty Door Series offers various panel options and door thicknesses, including 2-1/4". The panel and sticking options that are offered may be intermixed, depending on varying limitations, to accommodate all of your design desires. Additional costs and extended lead times may fluctuate depending on certain options. For more detailed information please see your pricing pages or contact a Teem Wholesale representative.
